EDUCATION

University of California, Riverside

Riverside, CA

Bachelor of Science in Computer Science

Expected Dec 2026

- **Relevant Coursework:** Computer Graphics, Graphics and Electronic Games, Virtual Reality, Operating Systems, Algorithms, Software Construction, Artificial Intelligence, Applied Linear Algebra

EXPERIENCE

Computer Science Instructional Assistant

Oct 2024 – Jan 2026

University of California, Riverside

Riverside, CA

- Evaluated and graded programming assignments for undergraduate CS course, reviewing algorithm correctness, code efficiency, and software design.
- Analyzed and tested student Python programs, providing structured feedback to improve debugging, readability, and coding practices.
- Collaborated with faculty and course staff to maintain consistent grading standards and track assignment progress.

PROJECTS

SuperHawt | *Unity 6, C#, Meta SDK, VR*

Apr 2026 – Jun 2026

- **Best Demo Award** — recognized by course professor among all class projects.
- Built a VR clone of Superhot in a team of 3, replicating the time-manipulation mechanic where time moves only when the player moves.
- Developed a shared gun prefab with projectile spawning, trail renderer, reload UI, and Meta SDK hand anchor integration for VR hand tracking.
- Implemented enemy AI with patrol behavior, ragdoll physics, and rigged animations; wrote health and kill logic for player and enemies.
- Repository: github.com/vinceednh/project-superhot-vr

Sisyphus | *Unity 6, C#*

Apr 2026 – Jun 2026

- Co-developed a horror roguelike RPG in a team of 5 where a moth navigates a dark forest lighting campfires to escape enemy waves.
- Built enemy systems end-to-end: AI movement, patrol, distinct enemy models, rigged animations, and player health integration.
- Designed the static game map with spawn points and interactables; implemented character controller, pause menu, and menu screens.
- Repository: github.com/vinceednh/project-sisyphus

Unload | *Unreal Engine 5, Blueprints*

Apr 2025 – Present

- Implemented core gameplay systems including player health bar, damage handling, and shooting mechanics using Blueprints in UE5.
- Collaborated with a 10-person team on level design and playtesting for this in-progress third-person shooter.
- Repository: github.com/HilMCVH/Unload

Portfolio Website | *React, TypeScript, Tailwind CSS*

Aug 2025 – Present

- Designed and developed a personal portfolio site showcasing game development projects; live at vinceednh.github.io

TECHNICAL SKILLS

Game Engines: Unreal Engine 5 (Blueprints, C++ gameplay), Unity 6 (C#, VR/Meta SDK)

Languages: C++, Python, TypeScript, C#

Frontend: React, Next.js, Tailwind CSS, HTML/CSS

Tools: Git, GitHub, VSCode, Figma
